

ABSTRACT OF THE DISCLOSURE

A relay terminal bolt is mounted to a positive-side heat sink such that a head portion thereof is in a state of close surface contact with a first surface of the positive-side heat sink and an external screw thread portion projects outward from a second surface of the positive-side heat sink. An output terminal is secured by placing a mounting portion in a state of surface contact with a flange portion and fastening it with a nut screwed onto the external screw thread portion. In addition, a wiring harness terminal is securely fastened to a coupling seat in a state of surface contact with a nut screwed onto the external screw thread portion.
